

EDF claim that if Hinkley C is built it will create

25,000 jobs

but these are temporary jobs which will, on average, last a year. If we assume that an average working life is 45 years then the equivalent number of permanent jobs is:

555 jobs

However of these only 20% are expected to go to local people. Therefore the number for local people is

111 jobs

this is over 9 years. Therefore the number created per year is

12 jobs

That's not many for £16 billion!
